

Features + Benefits

- + Gain full control over your stock to maintain accurate inventory
- + A complete Stock History on every item sold can be retained
- + Easily identify stock movement trends so that you can act quickly to minimise dead stock

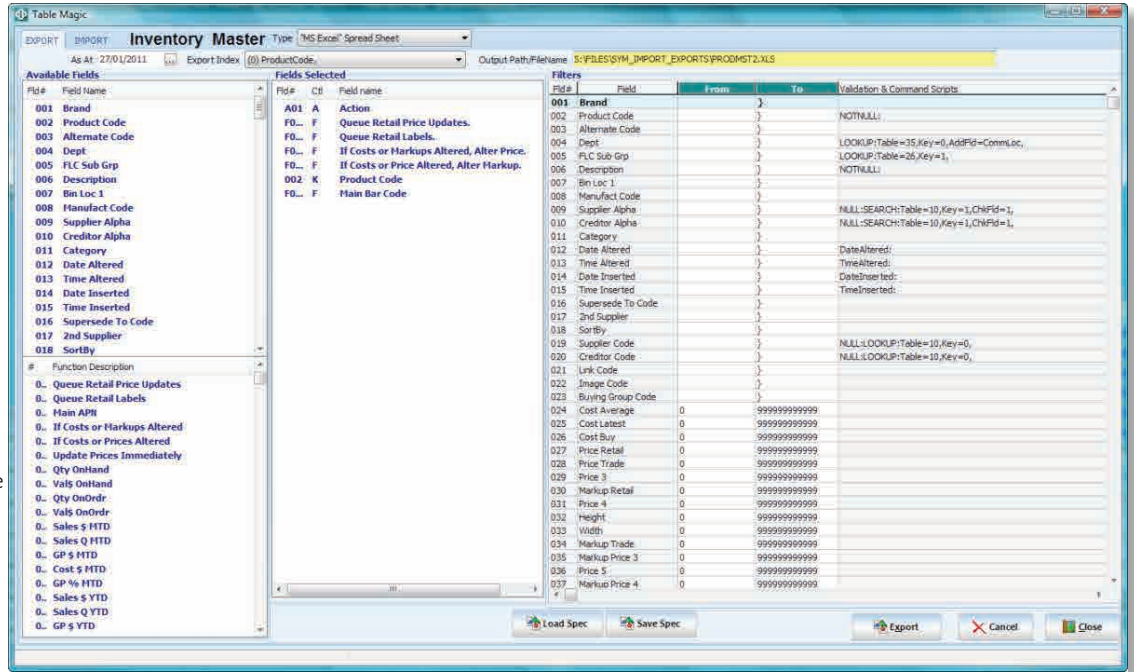

+ More Features

- + Forward pricing to ensure that new prices are taken into account when appropriate, and allows you to pre-set increases in cost and retail – and is updated as part of the End of Day
 - + Includes several pricing structures:
 - 5 standard product-based selling prices
 - Quantity pricing for all selling prices
 - Maximum discount allowable can be set by product, or globally
 - Maximum profit by department / categories can be set with warnings at POS – which can, in turn, be printed to a variance report
 - Set store-wide clearance sale discount percentages
 - Contract prices by customer and by date range
 - Discounts by customer and product department, FLC & Family
 - + Catalogue pricing with automatic date reset to standard pricing
 - + Catalogue reporting clearly indicating sales vs purchases, gross profit, cash flow effect and stock remaining
- ## + More Features
- + The ability to load promotions and pricing directly from Buying Group
 - + Access to data from promotion disks or from on-line communications established by the Buying Group
 - + Conversion factors can be used where products are bought and sold in different units of measure, eg. Items purchased by roll but sold by the metre, or rack/pack, timber lineal metres or cubic metres, etc.

+ More Features

- + Many different usage types are available for the system to deal with different types of products appropriately
- + Ability to automatically generate next available Stock Code number for goods without a suppliers code. This facility will also generate an APN for those products which do not possess one – allowing all products to benefit from the use of barcodes.
- + Stock fields for Timber include Height, Width and Pack Quantities – allowing easier inventory management decision making.
- + Automatic generation of stock records using the portable barcode readers linked to the supplier details.
- + Export/Import facilities allow the easy manipulation of product data in bulk, eg. A cost price rise from a supplier with Sell Price level recalculation. This will also prompt for the generation of labels when changes are made.

+ More Features

- + For multiple store situations you can view up to 998 satellite branch stores, and your warehouse details.
- + Stock On Hand, On Order and Available details can be easily shared across locations – reducing the need for costly inter-store queries.
- + Ability to integrate with POS, Debtors, Creditors, Purchase Ordering, Receipts, and General Ledger – reducing data entry
- + New Sympac Product Search Configurator function – create powerful custom search for different users or different departments. Comprehensive filtering lets users design custom searches for specific store needs.
